

## Rigetti Computing Reports First Quarter 2026 Financial Results

May 11, 2026

### Continued execution driven by 108-qubit system availability, customer deployments, and international expansion

BERKELEY, Calif., May 11, 2026 (GLOBE NEWSWIRE) -- Rigetti Computing, Inc. (Nasdaq: RGTI) ("Rigetti" or the "Company"), a pioneer in full-stack quantum-classical computing, today announced financial results for the first quarter ended March 31, 2026 and provided an update on recent business and technology milestones.

### First Quarter 2026 Financial Highlights

- Total revenues for the three months ended March 31, 2026 were \$4.4 million
- Operating loss for the three months ended March 31, 2026 was \$26.0 million
- For the three months ended March 31, 2026: GAAP net income \$33.1 million; non-GAAP net loss \$14.7 million
- For the three months ended March 31, 2026: GAAP diluted net loss per share \$(0.06); non-GAAP diluted net loss per share \$(0.04)
- As of March 31, 2026, cash, cash equivalents and available-for-sale investments totaled \$569.0 million

"In the first quarter, we continued to execute on our strategy by bringing our 108-qubit Cepheus-1-108Q system into general availability on Rigetti QCS, Amazon Braket, Microsoft Azure Quantum, and qBraid," said Dr. Subodh Kulkarni, Rigetti CEO. "We believe Cepheus-1-108Q is one of the most powerful generally available gate-based quantum computers in the world, and as the largest modular system on the market today, it is an important validation of our chiplet-based architecture in a production setting.

"We are also seeing growing adoption of Rigetti systems across government, academic, and commercial customers, including new on-premises Novera QPU sales that contributed to year-over-year revenue growth," Dr. Kulkarni continued. "At the same time, we remain focused on disciplined execution against our roadmap to quantum advantage, continuing to improve system fidelity and scale, supported by a strong balance sheet and prudent capital deployment."

Rigetti ended the first quarter of 2026 with a strong cash position and no debt, providing flexibility to continue investing behind its technology roadmap and customer opportunities.

### Business and Strategic Updates

#### **General Availability of 108-Qubit Quantum System**

Rigetti recently announced the general availability of its 108-qubit Cepheus-1-108Q quantum computing system, accessible to customers via Rigetti QCS and through Amazon Braket, Microsoft Azure Quantum, and qBraid. Cepheus-1-108Q is Rigetti's highest-qubit-count system to date and the industry's largest modular quantum computing system. Comprising twelve interconnected 9-qubit chiplets, the system builds on Rigetti's prior 36-qubit Cepheus-1-36Q system and further validates the Company's chiplet-based scaling architecture.

#### **Advancing On-Premises Quantum Computing Systems**

Rigetti continued to advance delivery of previously announced on-premises system orders, including Novera-based systems supporting research, development, and system-level experimentation. During the quarter, the Company completed the sale and shipment of a 9-qubit Novera QPU to the University of Saskatchewan, which will serve as the core of the institution's first quantum computing system. These sales underscore sustained demand for hands-on access to quantum hardware across academic, government, and research institutions and contributed to year-over-year revenue growth.

#### **International Expansion and UK Investment Initiative**

Rigetti announced its intention to invest up to \$100 million in the United Kingdom to accelerate quantum computing development. The planned investment will go toward deploying a UK-based quantum computing system with over 1,000 qubits in the next three to four years and builds on the Company's existing presence in the UK and aligns with the UK government's broader initiative to advance domestic quantum infrastructure. It is expected to support continued development of scalable superconducting quantum systems and long-term collaboration across government, academic, and industry partners.

### Technology Milestones

#### **Continued Fidelity Improvements Across Superconducting Systems**

Rigetti continued to demonstrate progress in gate performance across its superconducting quantum platforms during the quarter. The Company achieved a median 99.8% two-qubit gate fidelity with 40 nanosecond gate speeds on its 9-qubit system by using a proprietary adiabatic CZ gate scheme. Leveraging this same gate scheme, the Company achieved two-qubit gate fidelities as high as 99.9% on prototype systems, reinforcing confidence that high-fidelity operations can be maintained as systems scale. Rigetti also sustained strong single-qubit fidelity across deployed systems, supporting more reliable circuit execution.

#### **Advancements in Chiplet-Based Architecture**

Rigetti made further progress in validating and optimizing its chiplet-based quantum architecture. During system testing, the Company identified and addressed coupler-related interactions that emerge at scale, implementing chip design refinements that improved system speed and performance

consistency. Rigetti believes that its chiplet-based approach provides a practical path toward larger-scale quantum systems over time.

### **System-Level Performance and Control Enhancements**

Throughout the quarter, Rigetti continued to improve system-level performance through refinements across the stack, including innovations in materials and fabrication techniques and upgraded control electronics. These enhancements support greater operational stability and reproducibility across systems, enabling customers to run wider and deeper circuits while maintaining the fast gate speeds inherent to superconducting qubit technology.

### **Ongoing Error Mitigation and Scalability Research**

Rigetti continued its collaboration with ecosystem partners, including Riverlane, to advance error mitigation and error correction research on Rigetti's superconducting quantum systems. While fault-tolerant quantum computing remains a longer-term objective, the Company believes sustained progress in fidelity, speed, and scale is essential to enabling practical quantum advantage.

### **Conference Call and Webcast**

Rigetti will host a conference call today, May 11, 2026, at 5:00 pm ET, or 2:00 pm PT, to discuss its first quarter 2026 financial results.

You can listen to a live audio webcast of the conference call at <https://edge.media-server.com/mmc/p/9vx4c96d> or the "Events & Presentations" section of the Company's Investor Relations website at <https://investors.rigetti.com/>. A replay of the conference call will be available at the same locations following the conclusion of the call for one year.

To participate in the live call, you must register using the following link: <https://register-conf.media-server.com/register/Bldbc06bbc0efb4b84b0681bceed95f22a>. Once registered, you will receive dial-in numbers and a unique PIN number. When you dial in, you will input your PIN and be routed into the call. If you register and forget your PIN, or lose the registration confirmation email, simply re-register to receive a new PIN.

### **About Rigetti**

Rigetti is a pioneer in full-stack quantum computing. Rigetti quantum computers are based on superconducting qubits, which are widely believed to be the leading qubit modality given their maturity, clear path to scaling, and fast gate speeds. Current Rigetti quantum computing systems achieve gate speeds of 50-70 nanoseconds, which is about 1,000 times faster than alternative modalities such as trapped-ion and neutral-atom systems.

Rigetti sells on-premises 9-qubit to 108-qubit quantum computing systems, supporting national laboratories and quantum computing centers. Rigetti's Cepheus 36-qubit to 108-qubit systems are based on the Company's proprietary chiplet-based technology and include the Company's control electronics. Rigetti's 9-qubit Novera QPU supports a broader R&D community with a high-performance, on-premises QPU designed to plug into a customer's existing cryogenic and control systems.

The Company operates quantum computers over the cloud through its Rigetti Quantum Cloud Services (QCS) platform, enabling global enterprise, government, and research clients to pursue R&D. The Company's proprietary quantum-classical infrastructure provides high-performance integration with public and private clouds for practical quantum computing.

Rigetti developed the industry's first multi-chip quantum processor for scalable quantum computing systems. Leveraging this proprietary technology, Rigetti deployed the industry's largest multi-chip quantum computer in 2026 with Cepheus-1-108Q, based on twelve 9-qubit chiplets tiled together. The Company designs and manufactures its chips in-house at Fab-1, the industry's first dedicated and integrated quantum device manufacturing facility. Learn more at <https://www.rigetti.com/>.

### **Non-GAAP Financial Measures**

To supplement Rigetti's consolidated financial statements presented in accordance with U.S. generally accepted accounting principles (GAAP), the Company uses certain non-GAAP financial measures, non-GAAP net loss, non-GAAP net loss per share attributable to common stockholders-basic and non-GAAP net loss per share attributable to common stockholders-diluted. The Company believes that providing these non-GAAP financial measures enhances the Company's and investors' ability to compare the Company's past financial performance with its current performance. Non-GAAP net loss is defined as GAAP net income excluding stock-based compensation expenses, change in fair value of derivative warrant liabilities and change in fair value of earn-out liabilities, non-GAAP net loss per share attributable to common stockholders-basic is defined as non-GAAP net loss divided by the weighted average shares used to compute net income per share attributable to common stockholders-basic and non-GAAP net loss per share attributable to common stockholders-diluted is defined as non-GAAP net loss divided by the weighted average shares used to compute net (loss) income per share attributable to common stockholders-diluted. The Company excludes stock-based compensation expenses, change in fair value of derivative warrant liabilities and change in fair value of earn-out liabilities from non-GAAP net loss and non-GAAP net loss per share attributable to common stockholders - basic and non-GAAP net loss per share attributable to common stockholders – diluted, primarily because these are non-cash items that the Company believes are not reflective of ongoing operating results and such items may not be comparable from period to period due to changes in the fair market value of the Company's common stock, which is influenced by external factors such as the volatility of public markets and the performance of the Company's peers. These non-GAAP financial measures, which are included in this press release and which may be referred to on the conference call discussing the Company's first quarter financial results, are provided as supplemental information to the financial measures presented in this press release and discussed on the conference call that are calculated and presented in accordance with GAAP. Non-GAAP financial measures should not be considered a substitute for, or superior to, financial measures determined or calculated in accordance with GAAP. The Company's definitions of its non-GAAP financial measures may not be comparable to similarly titled measures reported by other companies. For a reconciliation of each non-GAAP financial measure to its most directly comparable GAAP measure, please refer to the reconciliation tables at the end of this press release.

### **Cautionary Language and Forward-Looking Statements**

Certain statements in this communication may be considered “forward-looking statements” within the meaning of the federal securities laws, including statements with respect to the Company’s expectations with respect to its future success and performance, including the belief that Cepheus-1-108Q is one of the most powerful generally available gate-based quantum computers in the world and its importance in validation of the Company’s chiplet-based architecture, including its capability to scale, in a production setting; belief that the on-premise sales underscore sustained demand for hands-on access to quantum hardware in various spaces; confidence that high-fidelity operations can be maintained as systems scale; belief that the Company’s chiplet-based approach provides a practical path toward larger-scale quantum systems over time; and belief that, while fault-tolerant quantum computing remains a longer-term objective, sustained progress in fidelity, speed, and scale is essential to enabling practical quantum advantage. These forward-looking statements are based upon estimates and assumptions that, while considered reasonable by the Company and its management, are inherently uncertain. Factors that may cause actual results to differ materially from current expectations include, but are not limited to: the Company’s ability to achieve milestones, technological advancements, including with respect to its technology roadmap; Company’s ability to deliver products to customers in time or at all, including actions by customers, such as controls over their facilities and cancelling orders; the ability of the Company to obtain government contracts successfully and in a timely manner and the availability of government funding; the potential of quantum computing; the success of the Company’s partnerships and collaborations; the Company’s ability to accelerate its development of multiple generations of quantum processors; the outcome of any legal proceedings that may be instituted against the Company or others; the ability to maintain relationships with customers and suppliers and attract and retain management and key employees; costs related to operating as a public company; changes in applicable laws or regulations; the possibility that the Company may be adversely affected by other economic, business, or competitive factors; the Company’s estimates of expenses and profitability; the evolution of the markets in which the Company competes; the ability of the Company to implement its strategic initiatives and expansion plans; the expected use of proceeds from the Company’s past and future financings or other capital; the sufficiency of the Company’s cash resources; unfavorable conditions in the Company’s industry, the global economy or global supply chain, including rising inflation and interest rates, deteriorating international trade relations, political turmoil, natural catastrophes, warfare, and terrorist attacks; and other risks and uncertainties set forth in the section entitled “Risk Factors” and “Cautionary Note Regarding Forward-Looking Statements” in the Company’s Annual Report on Form 10-K for the year ended December 31, 2025 and Quarterly Report on Form 10-Q for the quarter ended March 31, 2026 and other documents filed by the Company from time to time with the Securities and Exchange Commission.

These filings identify and address other important risks and uncertainties that could cause actual events and results to differ materially from those contained in the forward-looking statements. Forward-looking statements speak only as of the date they are made. Readers are cautioned not to put undue reliance on forward-looking statements, and the Company assumes no obligation and does not intend to update or revise these forward-looking statements other than as required by applicable law. The Company does not give any assurance that it will achieve its expectations.
